

BASING F-35A LIGHTNING II FORMAL TRAINING UNIT AT KINGSLEY FIELD AIR NATIONAL GUARD BASE ENVIRONMENTAL IMPACT STATEMENT

Proposed Construction

To accommodate the F-35A, or retention of the legacy F-15C/D aircraft, the 173 FW would require both new construction and modification of some existing facilities. All construction would be located within the airport or installation boundaries.

Examples of some basic facility and infrastructure requirements include:

- Squadron operations/maintenance facilities
- Hangars
- Simulator facilities
- Installation communications infrastructure
- Electrical system upgrades
- Other installation support facilities, such as an engine repair shop and aircraft parking aprons
